**Be  
Equipped**

The technical-engineering company "Karmania Tajhiz Sanat Gavashir" was established in 2019, relying on a decade of technical, engineering and commercial experiences of its founders and obtaining the necessary licenses in the field of industry and trade. Mainly the activities of the company are concerned with providing technical advisory services and supplying infrastructure equipments for production lines in the parent industries and consumer industries of industrial units. Currently, Karmania is a well-known, reliable name and the first choice for mutual cooperation. Many provincial, regional and national industrial units turn to this company to supply their imported equipment. Karmania Tajhiz Sanat Gavashir Engineering Company becomes famous due to its focus on principles such as transparency of activities and proper customer responsiveness.

Obtaining the necessary licenses in all fields, from import licenses to warehousing in the field of supply and standardization licenses in the field of management and production, the company has been able to develop supply communication lines inside and outside the country with appropriate quality and by connecting these sets to each other comparing with other companies in the field, and respectfully the competitiveness of this company increases everyday. This has provided the basis of industrial units trust (on our activities) at the provincial, national and regional scope, and has created the infrastructural and logistical basis for the development of the quantity and quality of services and products of Karmania Tajhiz Company. Some of these licenses are:

**Import and commercial licenses**

such as commercial cards

**Production licenses for**

Industrial equipments

**Collection standardization certificates**

such as ISO certificates

With these licenses and the technical, engineering and commercial knowledge of the company's specialists, Karmania Tajhiz has been able to cover a wide range of needs of industries on a provincial, regional and national scope.

## Technical and Engineering Advisory

Choosing the right components is always an important and fundamental challenge in the industry group. Supply of components from international companies requires technical advice and specialized direct communication with production technical experts in international partner companies, and Karmania Tajhiz, relying on technical knowledge and its mutual communication with suppliers, has been able to provide a set of technical and specialized services across the country in the form of advisory services to partner industries.

## Trading

Due to the volume of Karmania Tajhiz exchanges with Iranian industries, commercial services as a key activity has a very fundamental and important role in advancing the company's goals and plays the largest share in turnover. The most important measures taken in this sector can be divided into two main groups of foreign and domestic trade.

### ▶ Foreign trade

In international relations, Karmania Tajhiz, creating strong communication mechanisms with different brands and suppliers abroad, has tried to provide the items needed by the industrial units with the most reputable brands and guarantees from the global markets, and to provide a set of common interests for these partners internationally and it has become a reliable name in the import industry by relying on its financial strength, reputation and credit gained from its supply activities in the past years.

### ▶ Domestic trade

karmania Tajhiz has tried to cover the important and basic needs of industrial units on national level in the field of domestic supply and by creating strong communication mechanisms with industries in the country, it has supplied the items needed by industrial units in the shortest time and with the highest quality from international partner suppliers. Expanding the scope of services of this unit to the industries inside Iran and approaching the leading standards in the field of equipping and supplying of industrial items make the company the first choice of industrial units.

The abundant capabilities of karmania Tajhiz Sanat Gavshir Technical Engineering Company in the international trading supply network combined with engineering teams have caused a wide range of products required by industrial units to be included in the company's supply portfolio and continuously expand the product supply range.

### Mother industry start-up equipment

One of the important and basic needs for the development of countries is the development of mother industries. The mother industry is involved in a wide range of technologies and the quantity of parts used in them is very diverse; In other words, these industries are the driving force of the economy

### Production workshop equipment

Industrial production workshops meet most of the common needs and in some cases, specialized ones in the industrial field. These workshops use a set of tools and special lathe, cutting and polishing machines in the production of parts

### Mining machinery parts

Mineral reserves are very abundant in Iran and the extensive activity of specialized machinery in the mining sector from the extraction to the transfer of minerals has made this sector of the industry in constant need of new parts.

### Production lines consumables

Industrial production lines are an important part of the industrial development process. The tools and machinery of this sector have constant consumption needs, many of which are imported, and the regular and timely supply of these items is an important necessity in the continuation of production and the activation of industrial production lines.

### Industrial tools

Industrial tools include all the tools that bring about accuracy and ease of production. These tools are divided into different categories according to the types of driving force they work with, such as electrical industrial tools and pneumatic industrial tools.

According to the company's fields of activity in providing technical, engineering and commercial services, the main supplied products can be classified into the following groups: mother industry start-up equipment, production workshop equipment, mining machinery parts, production line consumables and industrial tools.
